

Set Task

Given the set `my_set = {1, 2, 3}`, add the number 4 to the set.

Given the set `my_set = {1, 2, 3, 4}`, remove the number 2 from the set.

Given two sets `set1 = {1, 2, 3}` and `set2 = {3, 4, 5}`, find the union of the two sets.

Given two sets `set1 = {1, 2, 3}` and `set2 = {2, 3, 4}`, find the intersection of the two sets.

Find maximum and minimum value in a set

Given two tuples `tuple1` and `tuple2`, concatenate them to form a new tuple.

Given the tuple `my_tuple = (10, 20, 30, 40, 50)`, slice the tuple to get the last three elements.

Find the length of the tuple `my_tuple = ('a', 'b', 'c', 'd')`.

Dictionary Task:

Create a dictionary with the following key-value pairs: (name, age, and city).

Given the dictionary `person = {'name': 'Bob', 'age': 30, 'city': 'Los Angeles', 'job': 'Doctor'}`, access and print the values associated with the keys 'name' and 'job'.

Given the dictionary `person = {'name': 'John', 'age': 28, 'city': 'Chicago'}`, add a new key-value pair 'job': 'Teacher' to the dictionary.

Then update the value of the 'age' key to 29.

Given the dictionary `person = {'name': 'Sarah', 'age': 35, 'city': 'Miami', 'job': 'Lawyer'}`, remove the key-value pair with the key 'city'.

Find the number of key-value pairs in the dictionary `person = {'name': 'Liam', 'age': 33, 'city': 'Boston', 'job': 'Engineer'}`.

Create a nested dictionary to store the details of two people and access one dictionary keys and value
